

1. What's Copy Constructor?

- A **copy constructor** is a constructor that creates a **new object by copying the data from another object of the same class**.

2. What is Indexer, when used, as business mention cases u have to utilize it?

- An **Indexer in C#** allows an object to be accessed like an array using `[]`. It is useful when a class manages a collection of data, such as **employees, products, or students**.

3. Private, public, private protected, internal, internal protected

استنتى كذا... ال constructor مش method عادية، ومش بيتندء عليها بلإيدك كمان.
من أكثر الحاجات اللي كانت ملخبطه بالنسبالي في C# هي موضوع ال Constructor، خصوصاً
لما ألاقى أكثر من نوع ومش عارف أستخد... more

6 TYPES OF CONSTRUCTORS

A quick guide to the 6 constructor types in C#

What is a Constructor?
A special method that initializes a new object.

Default Constructor
Provided automatically when no constructor is defined.

Parameterized Constructor
Accepts parameters to initialize object with specific values.

Copy Constructor
Creates a new object as a copy of an existing one.

Static Constructor
Initializes the class once before any static members are used.

Private Constructor
Prevents creating objects from outside the class.

Overloading
Define multiple constructors with different parameter lists.

Automatic Execution
Called automatically when a new object is created.

Initial Values
Set initial values to fields for a valid object state.

Object Creation
Ensures the object is ready and usable right away.

C# OOP • Object Initialization • Constructors
